3M™ Fasara Interior Design Films will add a new dimension to your space. These decorative films are applied to glass, creating your unique appearance and at a very low cost when compared with the cost of etched glass. 3M™ Fasara design films are lightly textured. Light is dispersed softly, creating a high-class, amicable atmosphere. 3M™ Fasara Interior Design films are exceptional quality design films that are suited for both glass partitions and to the inside surface of windows, either for residential glass or commercial building glass.

The light comes in and still you have complete privacy. The paradisiacal look achieved using 3M™ Fasara design films can enhance the look of an office, chiefly the boardroom and office partition glass. And all 3M™ Fasara films offer UV protection to help reduce fading. We serve commercial and residential customers from Summerlin to the Casinos on the Strip

The possibilities for artistic imagination for flat glass surfaces have been immensely improved with the introduction of 3M™ Fasara design films, a new concept in decorative window films. 3M™ Fasara Interior Design offers spectacular innovative features. 3M™ Fasara Glass Decorative Films have been specially developed to provide interior designers with an impressive selection of creative options for architecturally appealing glass decorations, which are design specifically to meet individual customer preferences. My goal is to meet your expectations and be the guy you call back for more improvements.
